READING PASSAGE 1

You should spend about 20 minutes on Questions 1–13, which are based on Passage 1 below.

THE IMPORTANCE OF CHILDREN'S PLAY

Brick by brick, six-year-old Alice is building a magical kingdom. Imagining fairy-tale **turrets** and fire-breathing dragons, wicked witches and **gallant** heroes, she's creating an enchanting world. Although she isn't aware of it, this fantasy is helping her take her first steps towards her **creativity**, and so it will have important **repercussions** in her adult life.

Minutes later, Alice has abandoned the kingdom in favour of playing schools with her younger brother. When she bosses him around as his 'teacher', she's practising how to regulate her **emotions** through pretence. Later on, when they tire of this and settle down with a board game, she's learning about the need to follow rules and take turns with a partner.

'Play in all its rich variety is one of the highest achievements of the human species,' says Dr David Whitebread from the Faculty of Education at the University of Cambridge, UK. It underpins how we develop as intellectual, problem-solving adults and is crucial to our success as a highly adaptable species.'

Recognising the importance of play is not new: over two **millennia** ago, the Greek philosopher Plato extolled its **virtues** as a means of developing skills for adult life, and ideas about play-based learning have been developing since the 19th century.

But we live in changing times, and Whitebread is mindful of a worldwide decline in play. I experienced almost every day of my childhood, are becoming increasingly scarce,' he says. better which is leading to greater competition in academic learning and schools. International bodies like the United Nations and the European Union have begun to develop policies concerned with children's right to play, and to consider implications for leisure facilities and educational programmes. But what they often lack is the evidence to base policies on.

'The type of play we are interested in is child-initiated, spontaneous and unpredictable – but as trivial, or even as something negative that contrasts with "work". Let's not lose sight of its soon as you ask a five-year-old "to play", then you as the researcher have intervened,' explains Dr Sara Baker. And we want to know what the long-term impact of play is. It's a real challenge and technology. Let's make sure children have a rich diet of play experiences.'

Reading

Dr Jenny Gibson agrees, pointing out that although some of the steps in the puzzle of how and why play is important have been looked at, there is very little data on the impact it has on the child's later life.'

Now, thanks to the university's new Centre for Research on Play in Education, Development and Learning (PEDAL), Whitebread, Baker, Gibson and a team of researchers hope to provide evidence on the role played by play in how a child develops.

'A strong possibility is that play supports the early development of children's self-control,' explains Baker. 'This is our ability to develop awareness of our own thinking processes – it influences how effectively we go about **undertaking** challenging activities.'

In a study carried out by Baker with toddlers and young pre-schoolers, she found that children with greater self-control solved problems more quickly when exploring an unfamiliar set-up requiring scientific reasoning. 'This sort of evidence makes us think that giving children the chance to play will make them more successful problem-solvers in the long run.'

If playful experiences do facilitate this aspect of development, say the researchers, it could be extremely significant for educational practices, because the ability to **self-regulate** has been shown to be a key predictor of academic performance.

Gibson adds: 'Playful behaviour is also an important **indicator** of healthy social and emotional development. In my previous research, I investigated how observing children at play can give us important **clues** about their well-being and can even be useful in the **diagnosis** of neurodevelopmental disorders like autism.' 

Whitebread's recent research has involved developing a play-based approach to supporting children find writing difficult, but we showed in a previous study that a playful **stimulus** was far more effective than an **instructional** one.' Children wrote longer and better-structured stories when they first played with dolls representing characters in the story. In the latest study, children first created their story with Legos*, with wish to protect their children from being the victims of traffic, as well as parents' increased better which is leading to greater competition in academic learning and schools.

Whitebread, who directs PEDAL, trained as a primary school teacher in the early 1970s, when, as he describes, 'the teaching of young children was largely a quiet backwater, untroubled by any serious intellectual debate or **controversy**'. Now, the landscape is very different, with hotly debated topics such as school starting age.

'Somehow the importance of play has been lost in recent decades. It's regarded as something benefits, and the fundamental contributions it makes to human achievements in the arts, sciences

Questions 9–13

Do the following statements agree with the information given in Reading Passage 1?

In boxes 9–13 on your answer sheet, write

Directions
Your question
must elicit
one word
or short
phrases.

Children's play

Uses of children's play

building a 'magical kingdom' may help develop 1 **creativity**
board games involve 2 **rules** and turn-taking

- Recent changes affecting children's play
populations of 3 **citizens** have grown
- opportunities for free play are limited due to 4 **fragile**
- fear of 5 **crime**
- increased 6 **competition** in schools

International policies on children's play

- it is difficult to find 7 **evidence** to support new policies
- research needs to study the impact of play on the rest of the child's 8 **life**

TRUE if the statement agrees with the information
FALSE if the statement contradicts the information
NOT GIVEN if there is no information on this

- 9 Children with good self-control are known to be likely to do well at school later on. **TRUE**
- 10 The way a child plays may provide information about possible medical problems. **NOT GIVEN**
- 11 Playing with dolls was found to benefit girls' writing more than boys' writing. **NOT GIVEN**
- 12 Children had problems thinking up ideas when they first created the story with Lego. **NOT GIVEN**
- 13 People nowadays regard children's play as less significant than they did in the past. **NOT GIVEN**

In boxes 9–13 on your answer sheet, write

TRUE
FALSE
NOT GIVEN

if the statement agrees with the information
